RESEARCH AND DEVELOPMENT

Project	Yes'o (UK)
Web Site/Ref	-
Role	CTO / Founder of Yes'o
What is it?	Yes'o is a cutting-edge supervision and co-parenting app built to support families during or after separation and dedicated professionals working alongside them. It offers unique features for direct or indirect contact with children, as well as tools for managing real-world acrimonious cases. The app includes co-parenting functionalities, video calling, gameplay options, messaging with supervision, CMS payments, and more to support users in various aspects of their relationships and responsibilities.
Aim and objectives	Yes'o, primarily aims to safeguard and improve supervised interactions with children, both direct and indirect, while also helping to communicate with children who may be reluctant to meet face-to-face. The creation of this app was a challenging process due to the need to tackle the specific obstacles encountered during supervision. Yes'o, is designed for both parents and children, deal with legal disputes or managing challenges of children who refuse to communicate. Depending on circumstances family courts may mandate supervised contact, either indirect or direct, through various means such as scheduled meetups, calls, email or letters. This will be incredibly challenging as the process entails close monitoring by a skilled social worker or a designated person who must be present during the supervised sessions. Many cases these scenarios often come with substantial financial expenses. The app is a dedicated platform that prioritizes the safety and security of children, parents, guardians, and professionals involved in their care. It provides a secure environment for communication, with a strong focus on the well-being of the children. The App makes supervised meetups easier by offering non-intrusive communication methods, gamification, and private spaces during calls. Additionally, it is designed to offers features such as event recording, handover management, comprehensive report creation, and more. Yes'o is a user-friendly and highly effective tool for supervision families and professionals.
End User Platform	Apple and Android devices (mobile and tablet) and Landsite to promote the product
Tech	App Native: Apple (Xcode) and Android (SDK, AGDK) Backend Services: API/Microservices (.NET) Database: mySQL Hosting: AWS Payments: Strip
